COMBI 250/1000 Lite

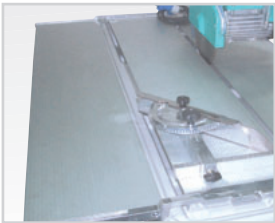

The Combi 250/1000 Lite is designed to cut today's tile and stone pieces which are larger and more expensive than in years past. Using precision cast aluminum and modern hi-tech design and manufacturing methods we have created a saw which is accurate, light, and extremely reliable. The Combi 250/1000 Lite is for those jobs which are smaller in nature, yet require cuts up to 40" in length. For larger scale commercial jobs it is advisable to upgrade to our Combi 350/1000.

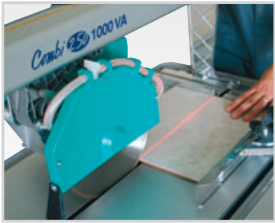

Perfect 45° cuts

Plunge up n' down

Accessory side table

Laser guide

▼ Cast Aluminum

Aircraft quality cast aluminum materials make for a rigid and light weight saw which will maintain its finish for years to come.

▼ Quality

The extruded aluminum travel bar design provides a smooth and accurate cut. Maintenance is minimal, just spray n' wipe with WD-40.

▼ Accuracy

The cast aluminum construction of the COMBI 250/1000 frame structure ensures a rigid, yet light weight saw. Out of the box it can cut tile or stone to within 1/32", the best in the business!

▼ Plunge Cuts

Plunge cuts are smooth and precise as the cast aluminum cutting head pivots on a sealed bushing. 'L' cuts for door jams are now quick n' simple.

▼ Stand included

The stand is like the saw, very light and very stable. The stand also has a built in wheelkit so that the Combi 250/1000 Lite is easy to move around the jobsite. And it folds in two in seconds to load it up or put it away quickly.

▼ A full length accessory side table is included at no charge! Support your larger tiles and stones correctly, no more chipping or breaking material because it is too difficult to support ... this saw has it all!

▼ Laser Guide

A laser cutting guide now comes standard with every combi 250/1000 Lite. Mark the line of your cut on the material, line it up with the laser, and go!

Full length accessory side table, **free** with each saw!
